First Aware of Plant Problem

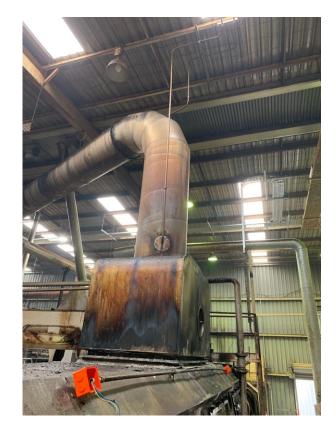

If a monitoring system was available, the plant would never have reached this temperature

2nd Stage of Incident

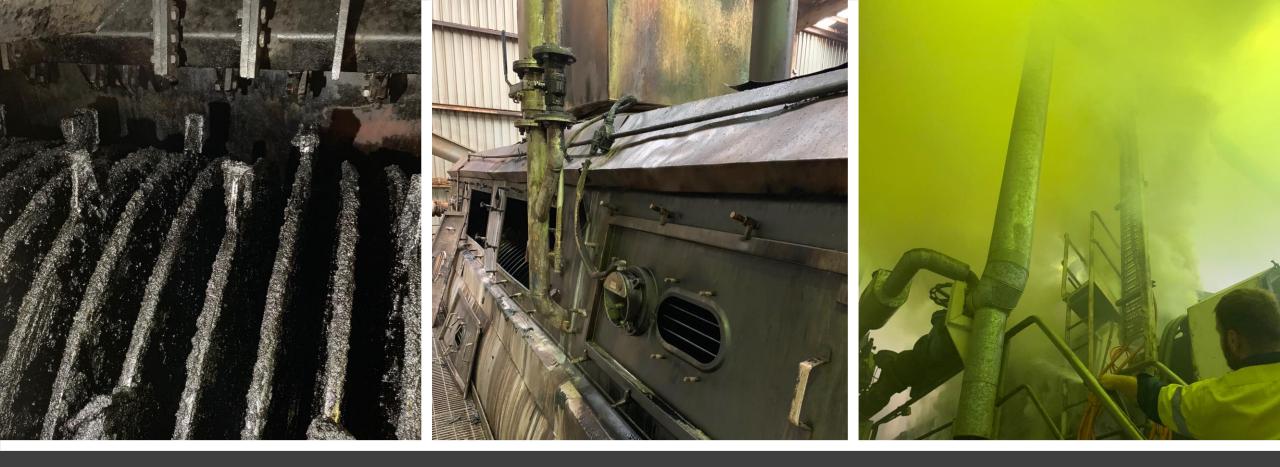

- Introduction of Water to the Vessel caused the flash off to fire
- Because of CO2 Gas bottle Dosage System piped into ducting, the Fire was put out within 30 Seconds.

CO2 Gas Bottle System & Injection Point

Aftermath of Cooker Fire

Inception

- Due to a Near Miss on a Cooker at MBL SA, which could have caused a Catastrophic fire and potentially could have demolished the High Temperature Plant, it was determined that an automated monitoring & Alarming system was required to react to high risk plant situations when the plant was unattended
- The Original Brief was for a monitoring system that could SMS when High Temperatures were encountered
- Monitoring was required for Shifts when the Plant was unattended such as Public Holidays, or Weekend events

Required System Functionality Temperature Monitoring system to SMS & Email alarm when temperatures reached 1st Stage & 2nd Stage alarm setpoints

Wireless System to negate costly supply & install of cabling. Easy change of Location when required

🖄 Multiple person notification of Alarming by SMS or Email

Historical graphing of temperatures

Computer & Mobile phone Application access

Event notification if sensors or system/ Gateway fails in any way

Sensors to be able to be calibrated for Accuracy Compliance

Automatic Email Reporting for System Health

Administration Level for Secure Setup

Configurable Reporting System

Scope of Work

System Supplied by Sudel industries Pty Ltd Supply & Configuration of Wireless Thermocouple sensors and Transmitters (10Yr Battery Powered)

Supply & Configuration of 4G Gateway with Battery Backup

1 Year subscription for Online Software to monitor temperatures – 12 sensor allowable under this license

1 Year subscription for SMS alerts to multiple people

1 year of SIM Data allowance 10MB / Month, and credits for 100 SMS alerts

On-site Install & Testing of system for data logging & SMS alert

Imonnit System Structure

Sensors

Gateway

Reports

Events

Maps

Sensors – Historical Trending / Events Logging / Settings Configuration / Calibration settings

Gateway – Configuration & History of Events

Reports – Gateway Battery Health & Signal / Battery Health of Transmitters

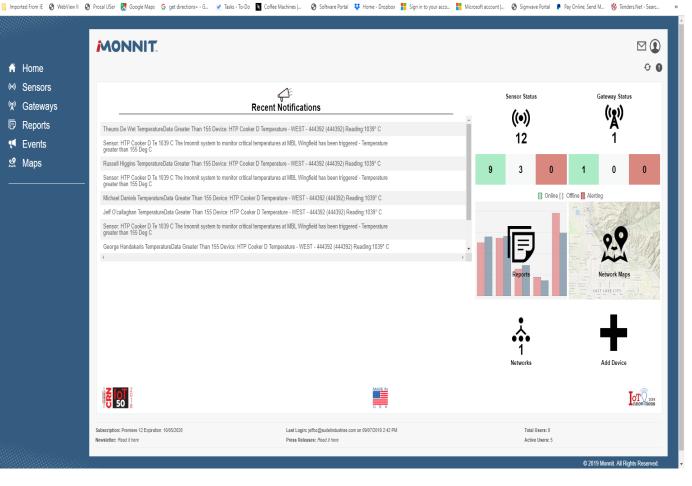

Events – Inactivity / High Alarm Temps / First Aware Message / Gateway on Battery

Maps – Have plant layout for easy location of Temperature Transmitters

Online Monitoring & Alarming System

Home Screen Shows Snapshot of Sensor and Gateway Status

Launch point to View Sensors / Gateways / Reports / Events / Maps

Sensors Screen – Temperature Reading

- Shows Green or Red status of alarm, current temperature reading, Wireless Transmitter Battery Status and Wireless transmitter Signal strength
- Can switch Sensors On or Off from being monitored
- Shows status if a Sensor is disconnected

Event Monitoring

- Trigger Events to Alarm and notify when Transmitters do not respond or communicate to Gateway for long periods of time to ensure operation
- Trigger Event when above Specific Temperatures for First Aware or 1st Alarm
- Trigger Event when above specific temperatures for 2nd Alarm
- Trigger Event when Power is lost to Gateway – On Battery

Future Expansion

Capability of Many sensors – Temperature / Humidity / Water Detection / Open & Closed Door / Motion detection / Gas Detection / Electrical Metering / Light / Pressure / Diff Air Pressure / Seat Occupancy / Air Velocity and many others

Software License Expandable for Increased Monitored Devices as required

Sudel Automatically Notify when SMS Credits about to Expire / or Data Allowance has been exceeded. Automatic Renewal of Software Licensing by Sudel and invoicing to ensure operation of system

Capability of Multiple Sites

Feedback Into Control System to Trigger CO2 Purge in Ductwork or Fire Control System

Project Complete & Operational

Project was completed in desired timeframe to quoted budgets and exceeded customer expectation
